

## CLAIMS

What is claimed is:

1. A computer readable medium containing program instructions for  
5 compressing video data with an edit track comprising computer readable code for  
compressing the video data, wherein the computer readable code for compressing  
comprises computer readable code for accessing the edit track to use data in the edit track  
during the compressing.
- 10 2. The computer readable medium, as recited in claim 1, wherein the  
computer readable code for compressing of the video data further comprises computer  
readable code for using information in the edit track to determine the bit resolution of  
quantization for a region defined within the edit track.
- 15 3. The computer readable medium, as recited in claim 2, wherein the  
computer readable code for compressing of the video data further comprises computer  
readable code for using motion information in the edit track to create a motion vector.
- 20 4. The computer readable medium, as recited in claim 3, wherein the  
computer readable code for compressing of the video data further comprises computer  
readable code for using information in the edit track to create a difference vector.
- 25 5. The computer readable medium, as recited in claim 4, wherein the  
computer readable code for compressing of the video data further comprises computer  
readable code for using information in the edit track to determine a number of I-frames  
that will be used for compression.

6. The computer readable medium, as recited in claim 5, further comprising computer readable code for editing video data, comprising:

computer readable code for creating a video track of edited video data; and

5 computer readable code for creating at least one edit object in the edit track, wherein the edit object defines a region that has been edited and a type of edit.

7. The computer readable medium, as recited in claim 1, further comprising computer readable code for editing video data, comprising:

computer readable cod for creating a video track of edited video data; and

10 computer readable code for creating at least one edit object in the edit track, wherein the edit object defines a region that has been edited and a type of edit.

8. The computer readable medium, as recited in claim 1, wherein the computer readable code for compressing of the video data further comprises computer  
15 readable code for using text information in the edit track to increase bit resolution of quantization of a pixel block.

9. The computer readable medium, as recited in claim 1, wherein the computer readable code for compressing of the video data further comprises computer  
20 readable code for using blend information in the edit track to decrease bit resolution of quantization of a pixel block.

10. The computer readable medium, as recited in claim 1, wherein the edit track specifies a region within which a video edit has occurred and the type of edit that  
25 occurred within the region.

11. A method of compressing video data with an edit track comprising compressing the video data, wherein the compressing comprises accessing the edit track to use data in the edit track during the compressing.

12. The method, as recited in claim 11, wherein the compressing of the video data further comprises using information in the edit track to determine the bit resolution of quantization for a region defined within the edit track.

13. The method, as recited in claim 12, wherein the compressing of the video data further comprises using motion information in the edit track to create a motion vector.

14. The method, as recited in claim 13, wherein the compressing of the video data further comprises using information in the edit track to create a difference vector.

15. The method, as recited in claim 14, wherein the compressing of the video data further comprises using information in the edit track to determine a number of I-frames that will be used for compression.

16. The method, as recited in claim 15, further comprising the step of editing video data, comprising:

creating a video track of edited video data; and

creating at least one edit object in the edit track, wherein the edit object defines a region that has been edited and a type of edit.

17. A system for compressing video data with an edited video track, an audio track, and an edit track, comprising:

an edit track reader for accessing data within the edit track and generating instructions based on the data within the edit track; and

5 a video compressor, which receives instruction from the edit track reader and receives the edited video track and audio track, and which compresses the edited video according to the instructions from the edit track reader.

18. The system, as recited in claim 11, wherein the video compressor is an  
10 MPEG video compressor, which compresses the video data into an MPEG format.

19. The system, as recited in claim 11, wherein the video compressor is an MPEG-2 video compressor, which compresses the video data into an MPEG-2 format.

15 20. The system, as recited in claim 13, wherein the video compressor is able to provide video compression with a single encoding.
